OUR COMMUNITY BROADBAND

OCB CASE STUDY
PRIVATE NETWORK BUILD

ELYSIUM COMMUNITY ENABLED

Project Scope

Build a private network to provide high speed broadband connectivity to community of approximately 150 homes

THE PROBLEM

- Exceptionally poor internet provision across community
- Limited ports available
- Body Corporate workers being bombarded with complaints
- Those working from home had to resort to expensive 4G broadband
- Owners and leasees were planning to leave the estate

THE SOLUTION

- Develop network design and proposal
- Consult with residents and key stakeholders
- Specify and install in a discrete location, a 20 metre mast to service the entire community
- Roll out the installation in time for Christmas 2015

THE BENEFITS

- Entire community enabled with super fast broadband
- Landlords overcome objectives from potential renters

Body Corporate Chair, Geoff Brinckman said, "What a God Send OCB has been to our community. My speeds have been excellent and OCB is over supplying as they originally claimed it would! We are also very grateful that they were able to deliver the service within the very tight time-frame we demanded!"
